SAMUEL WEBSTER, Treasurer.

Kingston, Feb. 28, 1881.

We, the undersigned, have examined the foregoing accounts of the Selectmen and Treasurer for 1880 and find them correctly cast and proper vouchers for the same.

A. C. CHASE,	} Auditors.
M. J. FRENCH,	

THE ANNUAL REPORT  
— OF THE —  
Superintending School Committee.

For the year ending March 1, 1881.

—o—

During the past year the schools of the town have been conducted on a system substantially the same as in previous years, with improvement noticeable in the 1st, 2nd and 5th Districts, while the 3rd District has maintained the standard accredited to it by the committee of last year. The 6th District has not been so fortunate as the others in the matter of progress, though perhaps had the teacher there been in a school-room associated with different traditions she might have been successful. There is plenty of material in this District capable of being developed into a high standard of scholarship, but it will require a teacher possessing that peculiar faculty of instruction which enables them to interest pupils by the practical application of principles, and a tact of government not dependent alone upon physical force.

*Prudential Committees.*—It is impossible to discover these qualities, or their absence, by any examination that an applicant can be subjected to. A teacher may be found to possess a thorough information in all branches, to be quick in perception and ready in wit, with avoirdupois sufficient to put at defiance our combined police force, and yet be a complete failure when subjected to the test of the school-room. It is therefore of the greatest importance that our Prudential Committees exercise

great caution in selecting teachers, and only procure those who have shown their tact by past experience. The good condition which our schools are in at present is due more to the good judgment our Prudential Committees have exercised in the selection of teachers than to any other cause, and we trust that the citizens of the several districts will continue to choose their committees with the welfare of their respective schools in view, rather than that of any particular individual.

*Teachers.*—Few teachers possess that happy faculty of adapting themselves to the individualities of their numerous pupils which enables them to impart information by associating principles with facts previously learned, and to develop ideas by the practical illustration of them. The pupil in Geography, who tells us of the shape, position, and motion of the earth, accounts for the tides, and says these things are made possible by reason of the “attraction of gravitation,” but who denies any idea of the nature of that force, and says he never saw its operation, when he is enabled to walk the earth only by reason of it and can’t open his eyes without witnessing a hundred phases of its operation, is as good an illustration of a boy learning a good deal and knowing nothing as can well be imagined; and yet teachers are numberless who consider their duties performed when they have asked a certain number of printed questions, and their pupils making remarkable progress if their memories are sufficiently strong to retain their answers long enough for the questions to be put. We should be particularly cautious of avoiding this class of teachers, who rely solely upon text-books as sources of information for their pupils, and who seem ignorant of the fact that scholars are often able to commit answers without a proper idea of their meaning.

*System.*—Upon our first visit to the schools we noticed an entire want of system in Geographies, occasioned by the use of different series of books, some of them being so antiquated that they served to no purpose but to

lead the pupil in paths long since abandoned by modern changes. We also found five different kinds of readers in use, mostly Sargent's, the publication of which has long been discontinued and therefore could not be supplied.

Though this lamentable state of affairs was not so great in Districts Nos. 2 and 3, yet there could be no question but that a complete and uniform system throughout the town would be extremely beneficial.

*Books.*—Impressed with this need we opened negotiations early last summer with several publishers in New York, which brought about a competition that enabled us to choose between three publishers at an even exchange. The result has been the introduction of complete and uniform series of Readers, Spellers and Geographies into all of our schools of the latest and best editions. Thus without expense we have been enabled to reap those advantages which must have made themselves manifest to all visiting our schools, both in the arrangement of classes and in the classification of studies, beside supplying our pupils with new books.

*Compulsory attendance.*—Our political fabric rests upon our common schools as a means of educating the masses who control our ballot boxes, and its perpetuity is assured to us only so long as we give to the youth of the land an insight into those elements of knowledge which will enable them to exercise their great political privileges with an eye to the common welfare. With this view our legislature has enacted certain statutes by which towns are enabled to compel the attendance at school of children between certain ages for a certain number of weeks. A vote of the town must be had to this effect however, and truant officers appointed to enforce the law. Without such a vote your committee simply has the power to bring an action against the parent to recover a penalty, which in most cases would not accomplish the desired result. We mention this because of requests to compel the attendance of children who spend their

time in idleness, instead of taking advantage of those inestimable privileges which our American free school system affords.

We would recommend to the consideration of our successor the suggestion of Mr. Waite, the Special Agent of the Interior Department, as to the advisability of requiring instruction to be given in the rudiments of political science, with special reference to the character and workings of the government and institutions of the United States, the privileges and obligations of citizenship, etc. This might be taught orally, using the chapters on Historical Geography in our new books as a basis, and by devoting an hour a week during a single term to its consideration might prove of lasting benefit.

Our thanks are due to John P. Sanborn, Esq., and to the Committee of last year for many valuable suggestions.

We append tables containing information usually furnished.

LOUIS G. HOYT.

Kingston, March 1, 1881.

## STATISTICAL TABLE.
